

PHANTOM 4

Forward Obstacle Sensing System gives the Phantom 4 its own pair of eyes, empowering it to see in three dimensions and to react. In Normal Mode if it sees an obstacle coming close it will stop and hover. In TapFly, ActiveTrack and Smart Return Home Modes it will avoid the obstacle, or hover to avoid a collision.

Using ActiveTrack, the Phantom 4 will recognize your subject, follow them naturally, and keep them in the frame. No GPS bracelet, tracker or beacon required. The Phantom 4 reacts to your touch. In TapFly Mode, simply tap live view on your smart device screen to send it flying.

The Phantom 4 has a 28 minute flying time. Integrated Lightbridge technology allows you to see what the Phantom sees in 720p HD at up to 3.5km away.

Shoot sharp, clean video in up to 4K and Full HD 1080p for slow motion, through a newly designed lens that dramatically increases sharpness.

3500m range***

INSPIRE

The Inspire 1 is DJI's most advanced complete package. All of the latest aerial technology is packed into one simple, ready-to-fly system, putting you in the sky within minutes. Carbon fiber arms give you the strength to maneuver in the air and they transform, moving out of the camera's way at the flick of a switch. With a full 360 unobstructed view.

When in flight, your remaining battery power is shown live, letting you know how long you can continue to fly. If the battery runs low or connection with your remote controller is lost, the Inspire 1 uses its positioning system and smart flight technology to return back to you.

Rotate and tilt the camera by tapping the screen and dragging your finger wherever you want to look. The Inspire 1's full 360 range is literally at your fingertips, and with one simple motion you can see and record images behind, below, and even slightly above wherever you are flying.

For the first time ever, the DJI Lightbridge video downlink has been integrated into a remote. This gives you a live view of what your camera sees when connected to a screen or mobile device and increases your maximum control range to 5Km
